Data Flow Diagrams:

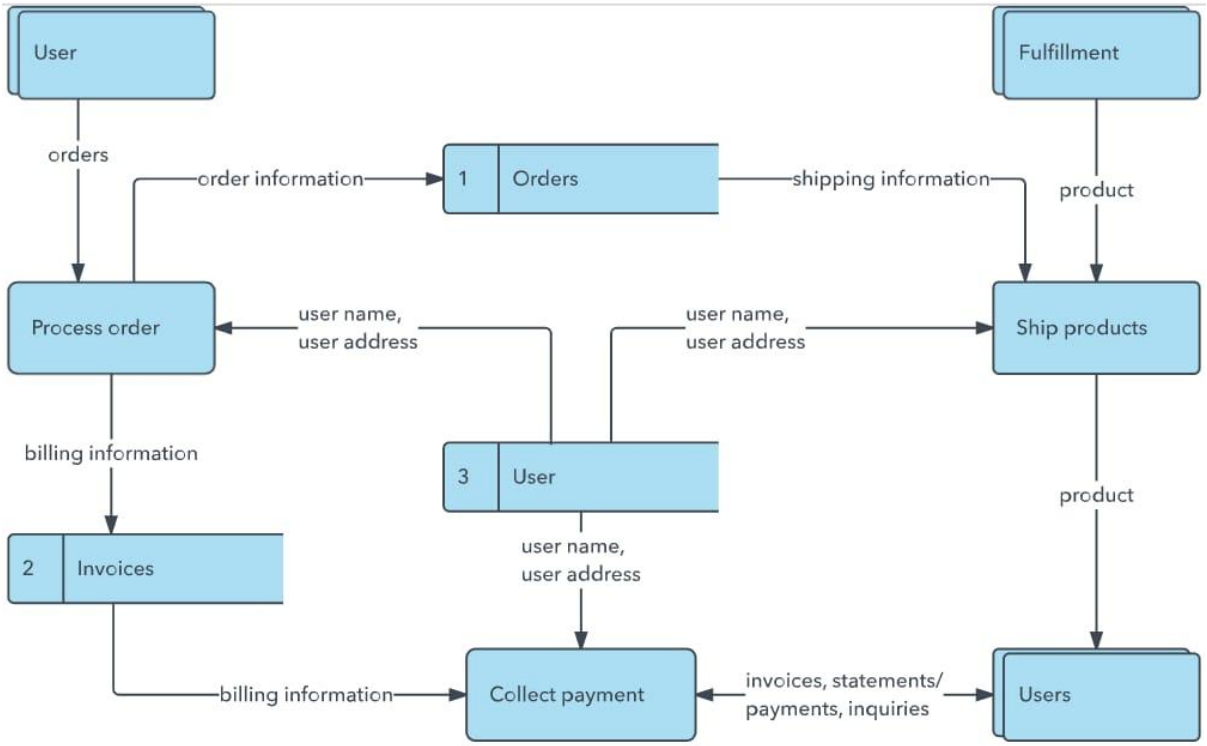

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example:

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

Example: DFD

User Stories

Use the below template to list all the user stories for the product.

	Functional Requirement	User Story Number	User Story / Task	Acceptance Criteria		
Customer (User)	Registration	US-1	As a user, I can register using my name, email and password.	User details are saved in MongoDB.	High	Sprint-1
Customer (User)	Login	US-2	As a user, I can log in using my registered email and password.	Valid credentials allow login.	High	Sprint-1
Customer (User)	Dashboard	US-3	As a user, I can access	Dashboard is displayed after	High	Sprint-1

			the AI-FITTRACK Assistant dashboard after login.	successful authentication.		
Customer (User)	AI-FITTRACK Search	US-4	As a user, I can search AI-FITTRACKs using keywords or questions.	Relevant AI-FITTRACK results are displayed.	High	Sprint-2
Customer(User)	AI Answer	US-5	As a user, I can ask questions and receive AI-generated answers.	Gemini generates and displays an answer.	High	Sprint-2
Customer (User)	Chat History	US-6	As a user, I can view previous questions and answers.	Chat data is stored and retrieved from MongoDB.	Medium	Sprint-3
Administrator	AI-FITTRACK Management	US-7	As an administrator, I can create, update and delete AI-FITTRACK records.	AI-FITTRACK changes are saved in MongoDB.	High	Sprint-3
